CHEMISTRY AND PHYSICS OF LIPIDS

Subject index

Volume 99 (1999)

Acid constant; 12-*S*-hydroxyheptadecatrienoic acid (HHT); Physical surface adsorption; Partition equilibrium; High-performance liquid chromatography **99**, 95

Acid-sensitive; Cationic lipid; Vinyl ether; Controlled release **99**, 145

Alumina–silver nitrate chromatography; Oxygenated sterols; Deuterium-labeled 26-hydroxycholesterol; NMR; Mass spectrometry **99**, 33

Amphiphiles; Critical micelle concentration; Dimeric surfactants; Dynamic surface tension; Synthesis **99**, 21

Bilayer curvatures; Sphingomyelin; Gel phase structures; Freeze-fracture electron microscopy; Liquid-ordered phase; Hydration protocol **99**, 111

Bilayer phase transition; Phospholipid mixture; Phase diagram; Miscibility; *cis*-Unsaturated acy chain; DSC **99**, 103

Carboxyfluorescein release; Dynamic light-scattering; Influence of cholesteryl sulfate on liposome stability; Sodium dodecyl sulfate; Stratum corneum lipid liposomes; Stratum corneum lipid liposomes/sodium dodecyl sulfate interactions; Surfactant/lipid molar ratios; Surfactant partition coefficients **99**, 169

Cationic lipid; Acid-sensitive; Vinyl ether; Controlled release **99**, 145

***cis*-Unsaturated acy chain**; Phospholipid mixture; Bilayer phase transition; Phase diagram; Miscibility; DSC **99**, 103

Compound; DPPC; Diacylglycerol; Freeze-fracture; Ripple-phase; Phase separation; X-ray scattering **99**, 155

Controlled release; Acid-sensitive; Cationic lipid; Vinyl ether **99**, 145

Critical micelle concentration; Amphiphiles; Dimeric surfactants; Dynamic surface tension; Synthesis **99**, 21

PII S0009-3084(99)00047-X

Cyclobacterium marinus; Phosphorus-free lipoaminoacid; Glycine; 3-Hydroxy fatty acid **99**, 139

Deuterium-labeled 26-hydroxycholesterol; Oxygenated sterols; Alumina–silver nitrate chromatography; NMR; Mass spectrometry **99**, 33

Diacylglycerol; Compound; DPPC; Freeze-fracture; Ripple-phase; Phase separation; X-ray scattering **99**, 155

Dimeric surfactants; Amphiphiles; Critical micelle concentration; Dynamic surface tension; Synthesis **99**, 21

Dipalmitoylphosphatidylcholine; Dispersion; Retinol; Structure; Vitamin A **99**, 87

Dispersion; Dipalmitoylphosphatidylcholine; Retinol; Structure; Vitamin A **99**, 87

DPPC; Compound; Diacylglycerol; Freeze-fracture; Ripple-phase; Phase separation; X-ray scattering **99**, 155

DSC; Phospholipid mixture; Bilayer phase transition; Phase diagram; Miscibility; *cis*-Unsaturated acy chain **99**, 103

Dynamic light-scattering; Carboxyfluorescein release; Influence of cholesteryl sulfate on liposome stability; Sodium dodecyl sulfate; Stratum corneum lipid liposomes; Stratum corneum lipid liposomes/sodium dodecyl sulfate interactions; Surfactant/lipid molar ratios; Surfactant partition coefficients **99**, 169

Dynamic surface tension; Amphiphiles; Critical micelle concentration; Dimeric surfactants; Synthesis **99**, 21

Fluorescence spectroscopy; Nucleoside-phospholipid conjugates; Sphingophospholipids; Phosphite triester approach; Spontaneous transfer; Protein mediated transfer **99**, 73

Fluorinated liposomes; Perfluoroalkylated (bola)amphiphiles; Vesicles; Polymorphism; Galactolipid **99**, 125

Freeze-fracture; Compound; DPPC; Diacylglycerol; Ripple-phase; Phase separation; X-ray scattering **99**, 155

Freeze-fracture electron microscopy; Sphingomyelin; Gel phase structures; Bilayer curvatures; Liquid-ordered phase; Hydration protocol **99**, 111

Galactolipid; Perfluoroalkylated (bola)amphiphiles; Fluorinated liposomes; Vesicles; Polymorphism **99**, 125

Gel phase structures; Sphingomyelin; Bilayer curvatures; Freeze-fracture electron microscopy; Liquid-ordered phase; Hydration protocol **99**, 111

Glycine; Phosphorus-free lipoaminoacid; 3-Hydroxy fatty acid; *Cyclobacterium marinus* **99**, 139

High-performance liquid chromatography; 12-*S*-hydroxyheptadecatrienoic acid (HHT); Physical surface adsorption; Partition equilibrium; Acid constant **99**, 95

Hydration protocol; Sphingomyelin; Gel phase structures; Bilayer curvatures; Freeze-fracture electron microscopy; Liquid-ordered phase **99**, 111

3-Hydroxy fatty acid; Phosphorus-free lipoaminoacid; Glycine; *Cyclobacterium marinus* **99**, 139

Indolinonic aminoxyls; Quinolinic aminoxyls; Radical-scavenging antioxidants **99**, 11

Influence of cholesteryl sulfate on liposome stability; Carboxyfluorescein release; Dynamic light-scattering; Sodium dodecyl sulfate; Stratum corneum lipid liposomes; Stratum corneum lipid liposomes/sodium dodecyl sulfate interactions; Surfactant/lipid molar ratios; Surfactant partition coefficients **99**, 169

Liquid-ordered phase; Sphingomyelin; Gel phase structures; Bilayer curvatures; Freeze-fracture electron microscopy; Hydration protocol **99**, 111

Long-lifetime lipid; Rhenium metal–ligand complex; Membrane dynamics **99**, 1

Mass spectrometry; Oxygenated sterols; Deuterium-labeled 26-hydroxycholesterol; Alumina–silver nitrate chromatography; NMR **99**, 33

Membrane dynamics; Long-lifetime lipid; Rhenium metal–ligand complex **99**, 1

Miscibility; Phospholipid mixture; Bilayer phase transition; Phase diagram; *cis*-Unsaturated acy chain; DSC **99**, 103

NMR; Oxygenated sterols; Deuterium-labeled 26-hydroxycholesterol; Alumina–silver nitrate chromatography; Mass spectrometry **99**, 33

Nucleoside-phospholipid conjugates; Sphingophospholipids; Phosphite triester approach; Fluorescence spectroscopy; Spontaneous transfer; Protein mediated transfer **99**, 73

Oxygenated sterols; Deuterium-labeled 26-hydroxycholesterol; Alumina–silver nitrate chromatography; NMR; Mass spectrometry **99**, 33

Partition equilibrium; 12-*S*-hydroxyheptadecatrienoic acid (HHT); Physical surface adsorption; Acid constant; High-performance liquid chromatography **99**, 95

Perfluoroalkylated (bola)amphiphiles; Fluorinated liposomes; Vesicles; Polymorphism; Galactolipid **99**, 125

Phase diagram; Phospholipid mixture; Bilayer phase transition; Miscibility; *cis*-Unsaturated acy chain; DSC **99**, 103

Phase separation; Compound; DPPC; Diacylglycerol; Freeze-fracture; Ripple-phase; X-ray scattering **99**, 155

Phosphite triester approach; Nucleoside-phospholipid conjugates; Sphingophospholipids; Fluorescence spectroscopy; Spontaneous transfer; Protein mediated transfer **99**, 73

Phospholipid mixture; Bilayer phase transition; Phase diagram; Miscibility; *cis*-Unsaturated acy chain; DSC **99**, 103

Phosphorus-free lipoaminoacid; Glycine; 3-Hydroxy fatty acid; *Cyclobacterium marinus* **99**, 139

Physical surface adsorption; 12-*S*-hydroxyheptadecatrienoic acid (HHT); Partition equilibrium; Acid constant; High-performance liquid chromatography **99**, 95

Polymorphism; Perfluoroalkylated (bola)amphiphiles; Fluorinated liposomes; Vesicles; Galactolipid **99**, 125

Protein mediated transfer; Nucleoside-phospholipid conjugates; Sphingophospholipids; Phosphite triester approach; Fluorescence spectroscopy; Spontaneous transfer **99**, 73

Quinolinic aminoxyls; Indolinonic aminoxyls; Radical-scavenging antioxidants **99**, 11

Radical-scavenging antioxidants; Indolinonic aminoxyls; Quinolinic aminoxyls **99**, 11

Retinol; Dipalmitoylphosphatidylcholine; Dispersion; Structure; Vitamin A **99**, 87

Rhenium metal–ligand complex; Long-lifetime lipid; Membrane dynamics **99**, 1

Ripple-phase; Compound; DPPC; Diacylglycerol; Freeze-fracture; Phase separation; X-ray scattering **99**, 155

12-*S*-hydroxyheptadecatrienoic acid (HHT); Physical surface adsorption; Partition equilibrium; Acid constant; High-performance liquid chromatography **99**, 95

Sodium dodecyl sulfate; Carboxyfluorescein release; Dynamic light-scattering; Influence of cholesteryl sulfate on liposome stability; Stratum corneum lipid liposomes; Stratum corneum lipid liposomes/sodium dodecyl sulfate interactions; Surfactant/lipid molar ratios; Surfactant partition coefficients **99**, 169

Sphingomyelin; Gel phase structures; Bilayer curvatures; Freeze-fracture electron microscopy; Liquid-ordered phase; Hydration protocol **99**, 111

Sphingophospholipids; Nucleoside-phospholipid conjugates; Phosphite triester approach; Fluorescence spectroscopy; Spontaneous transfer; Protein mediated transfer **99**, 73

Spontaneous transfer; Nucleoside-phospholipid conjugates; Sphingophospholipids; Phosphite triester approach; Fluorescence spectroscopy; Protein mediated transfer **99**, 73

Stratum corneum lipid liposomes; Carboxyfluorescein release; Dynamic light-scattering; Influence of cholesteryl sulfate on liposome stability; Sodium dodecyl sulfate; Stratum corneum lipid liposomes/sodium dodecyl sulfate interactions; Surfactant/lipid molar ratios; Surfactant partition coefficients **99**, 169

Stratum corneum lipid liposomes/sodium dodecyl sulfate interactions; Carboxyfluorescein release; Dynamic light-scattering; Influence of cholesteryl sulfate on liposome stability; Sodium dodecyl sulfate; Stratum corneum lipid liposomes; Surfactant/lipid molar ratios; Surfactant partition coefficients **99**, 169

Structure; Dipalmitoylphosphatidylcholine; Dispersion; Retinol; Vitamin A **99**, 87

Surfactant/lipid molar ratios; Carboxyfluorescein release; Dynamic light-scattering; Influence of cholesteryl sulfate on liposome stability; Sodium dodecyl sulfate; Stratum corneum lipid liposomes; Stratum corneum lipid liposomes/sodium dodecyl sulfate interactions; Surfactant partition coefficients **99**, 169

Surfactant partition coefficients; Carboxyfluorescein release; Dynamic light-scattering; Influence of cholesteryl sulfate on liposome stability; Sodium dodecyl sulfate; Stratum corneum lipid liposomes; Stratum corneum lipid liposomes/sodium dodecyl sulfate interactions; Surfactant/lipid molar ratios **99**, 169

Synthesis; Amphiphiles; Critical micelle concentration; Dimeric surfactants; Dynamic surface tension **99**, 21

Vesicles; Perfluoroalkylated (bola)amphiphiles; Fluorinated liposomes; Polymorphism; Galactolipid **99**, 125

Vinyl ether; Acid-sensitive; Cationic lipid; Controlled release **99**, 145

Vitamin A; Dipalmitoylphosphatidylcholine; Dispersion; Retinol; Structure **99**, 87

X-ray scattering; Compound; DPPC; Diacylglycerol; Freeze-fracture; Ripple-phase; Phase separation **99**, 155
